Accelerating Business Intelligence

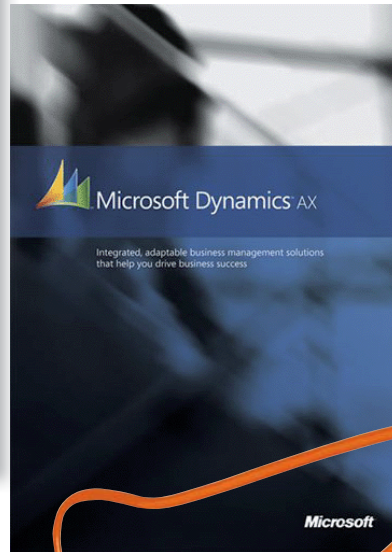

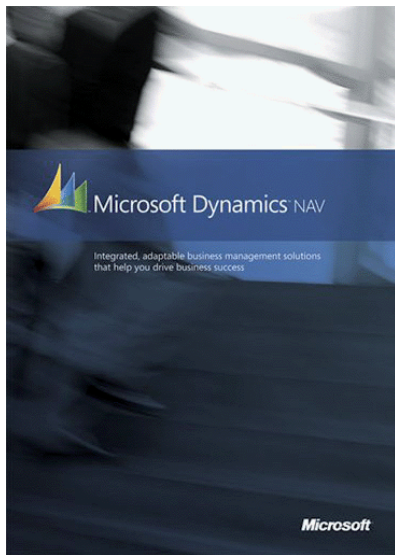

Microsoft[®] Dynamics[™] NAV and AX Adapters

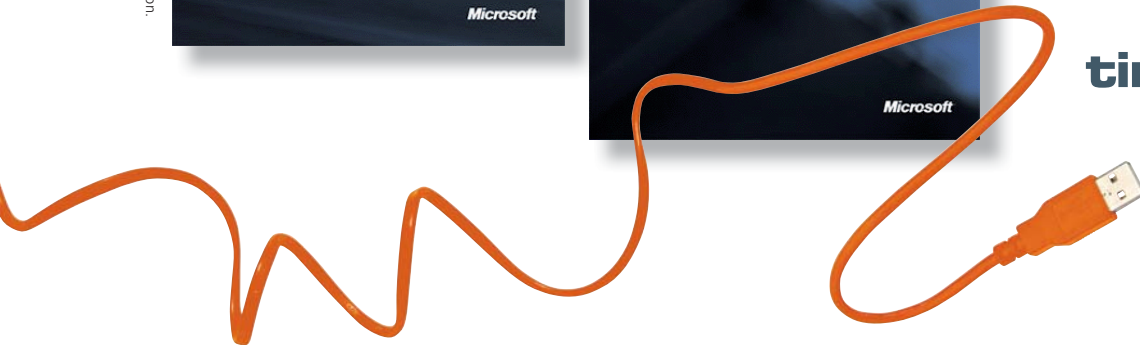

timeXtender comes with tailor-made adapters for Microsoft Dynamics and AX. It is therefore straightforward to extract data from your Dynamics ERP system into your business intelligence project.

Add this to the other core features of timeXtender and you have a truly dynamic and cost effective Business Intelligence solution.

timeXtender®
Accelerating Business Intelligence

Focus on Microsoft Dynamics

Take advantage of timeXtender's MS Dynamics adapters and gather information for fast and informed decision making. If you use Microsoft Dynamics NAV or AX, you have massive amounts of valuable information that can give you unprecedented insights into your business. Only, you have to find a way to unlock the data from the ERP system.

Unlocking data

Typically, unlocking data from NAV and AX has been a labor-intensive and time-consuming process requiring large amounts of code – but with timeXtender this process changes. timeXtender comes with adapters for both Microsoft Dynamics NAV and AX – adapters that simplify and speed up the extraction of data. You can consolidate data from multiple companies in one data warehouse, and get the full picture of your business – without being an expert in the underlying AX or NAV database.

Faster access to information

timeXtender gives you Business Intelligence for Dynamics with focus on business – not technology. timeXtender auto-generates the underlying project code and makes Business Intelligence for Dynamics less complicated and less costly.

Once you've located the data you need, you can design a data warehouse and data cubes using the visual drag and drop approach of timeXtender. And of course you can combine the data from Dynamics NAV and AX with information from other sources as well. The adapter synchronizes with your Dynamics application, and keeps the information current at all times.

Whether you prefer Microsoft Excel or more advanced tools such as Target or Performance Point Server for viewing information doesn't matter because timeXtender supports all frequently used reporting tools.

Essential features:

Dynamics NAV

- Global company accounts selection with an option of overriding at table level
- Single logical data model – including SIFT tables – regardless of the number of physical tables
- Dimension table merge across company accounts

Dynamics AX

- Global company accounts selection with an option of overriding at table level
- Virtual company accounts extraction including table collections and tables
- Base enums and associated labels extraction

See how it works

Experience timeXtender in action on your own Dynamics data.
