Accelerating Business Intelligence

Taking a different approach

# SMART

## Taking a different approach

What you want from Business Intelligence is insights and knowledge you can use for financial planning and decision-making in an unpredictable marketplace. What you're hearing about is never-ending implementation cycles, expensive consulting, outdated reports, and plenty of talk about technology – not business.

timeXtender addresses these issues head-on, and ensures that your Business Intelligence project doesn't become just another management headache. timeXtender introduces a visual drag-and-drop approach to Business Intelligence that simplifies the process of collecting and consolidating your company data and turning it into usable knowledge. As a result, you cut the costs of introducing Business Intelligence in your organization, and increase the time you have to manage your business.

## Let business take center stage

timeXtender recognizes that Business Intelligence is not about technology. Business Intelligence is collecting and preparing data for analysis, and presenting it in a format that makes it useful for accurate decision making. timeXtender is therefore a means to an end – albeit an important one – and that end is ensuring that you and your team can get the information you need, when you need it – in your reporting tool of choice.

You decide how and when you want to view and use the information – whether it's presented as pie charts, dashboards or pivot tables. After all, it is your business and you know best how the information should be displayed. timeXtender's role is to ensure that trustworthy information is available immediately – regardless of whether you're using Microsoft Excel, Performance Point Server, Targit or other reporting tools.

## More efficient – less complicated

Typically the most time-consuming part of any Business Intelligence project is what you don't see – namely the writing of massive lines of code. A process which is both labor intensive and expensive.

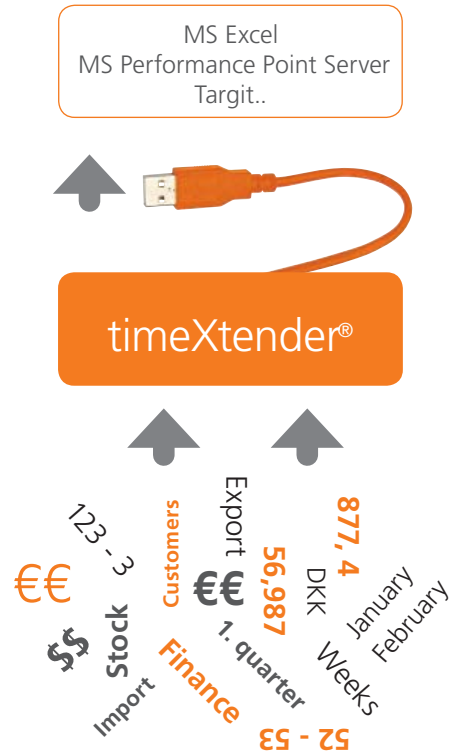

However, timeXtender simplifies and streamlines the design process by auto-generating the project code. This ground-breaking approach means that your Business Intelligence project is ready to go live faster, requires less technical expertise, and is easier to update. Bottom line: you realize a less costly and less time-consuming Business Intelligence implementation. No other tool can match this approach.

## Quick Cubes

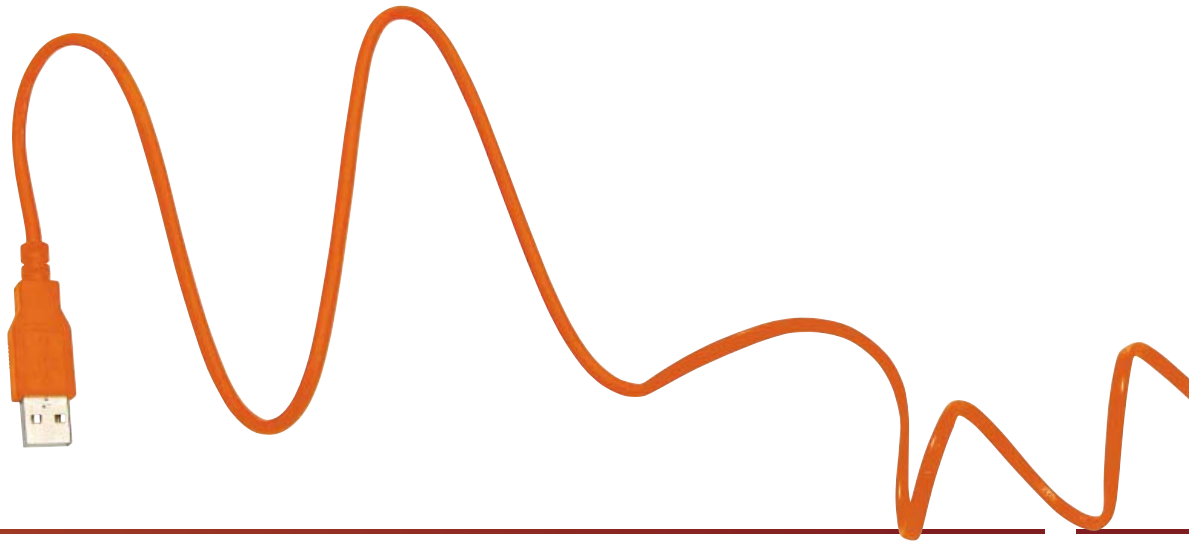

If you prefer to start with pre-configured cubes, timeXtender Quick Cubes™ is the right choice for your organization. With Quick Cubes you get pre-packaged Business Intelligence for all companies and budgets. Quick Cubes come complete with data cubes for Finance, Inventory, Purchases, and Sales. With the click of a mouse you get powerful insights to your business so that you can make the right decisions and take immediate action.

## Make the right decision

There's plenty of technology in the world that supports Business Intelligence. The trick is choosing what is of most value to your business. With low acquisition costs and minimal maintenance expenses timeXtender makes Business Intelligence affordable to small and big businesses alike – across industries and markets. This means your company can start reaping the benefits of Business Intelligence immediately.

# FAST

# timeXtender fundamentals

timeXtender is the ultimate Business Intelligence tool. It offers you a fast, smart, and easy way of working with business intelligence projects. Here's how.

## Consolidating information

Your company is probably like most companies. Data is dispersed throughout your organization and stored in a variety of places such as spreadsheets, ERP and CRM systems, and electronic documents. timeXtender makes it easy for you to unlock the data regardless of where it is stored, so that you can build a data warehouse, and get a single, trustworthy view of your data. timeXtender even comes with built-in adapters for systems such as Microsoft® Dynamics™.

## Designing a project

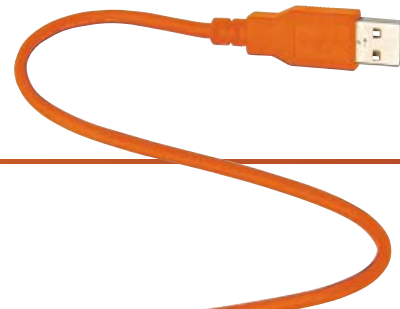

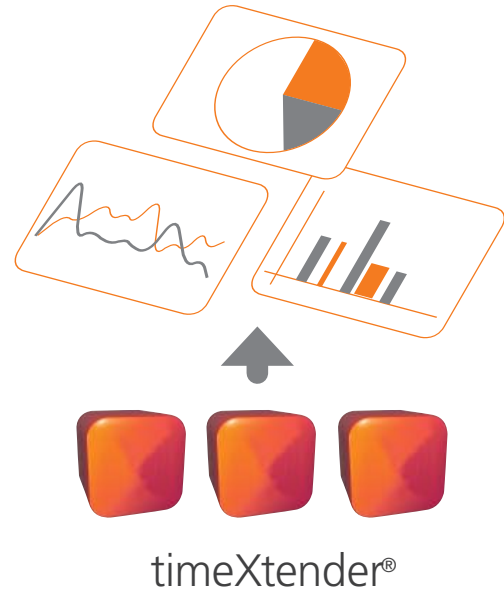

timeXtender comes with a rich range of tools and features that lets you design everything from data connections and data warehouses to data cubes. And when we say design, we mean you don't have to write a single line of code. The unique design environment enables you to model all aspects of your Business Intelligence project using drag and drop and specially designed windows and menus. And when you deploy the project, the underlying SQL code is auto generated.

## Summarizing Data and Making Calculations

When you use timeXtender to design data cubes, information can be presented in a number of ways depending on how you want your data cubes to summarize data. You can get drill-down information on specific customers or insights on a variety of issues – from product sales to vendor performance. Cubes are created using dialogs that are specifically designed to take the complexity out of cube building. Furthermore, we understand that over time new cubes may be needed, and timeXtender therefore enables rapid reuse and instant changes. With timeXtender you get a fully flexible project – not a static and rigid solution.

## Support for Changing Information Needs

Your Business Intelligence system must evolve continuously to effectively support your changing information needs. You don't have to accept only standard reports. Using timeXtender, custom reports and data cubes are made swiftly in the design environment. timeXtender's unique design capabilities empower you to make changes on the fly – without having to worry about massive lines of custom code that needs to be updated. You and your team can focus on the goal of getting the right information at the right time.
